

# Keeping the momentum of carbon capture and storage

19 November 2013

#### **Professor Stuart HASZELDINE**

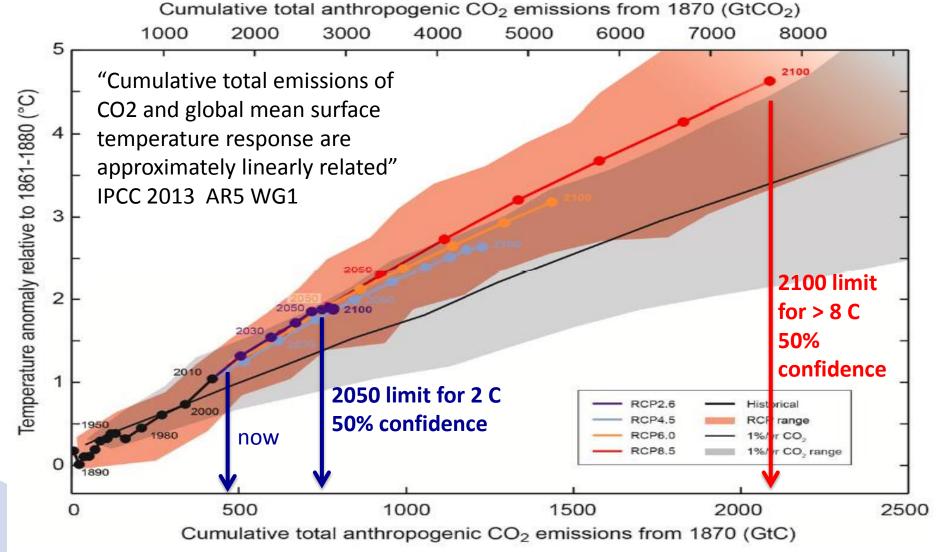

University of Edinburgh

**Scottish Carbon Capture & Storage** 

### Too much fossil carbon: IPCC

TOTAL emissions of fossil carbon have to be contained Not just the rate of emission: CCS buys time – but 20 yr late

### The record of CCS: UK

Grangemouth 2002 BP

Peterhead DF1 2005 – 07 BP - SSE

Competition 1 2007 - 11 FEED x 2

Competition 2 2012 – 13 FEED x 2 Cost reduction

**Rapid progress** 

- ✔ Territorial claim of pore space
- ✓ Legal adoption of EC Directive
- ✓ Licensing, evaluate, operate close
- ✓ FEED support
- ✓ 1 Billion CAPEX prize (share of)

- ✓ Electricity Market CfD
- Research support
- Stakeholder communication
- International Partnership
- Knowledge Exchange

First CO2 injected 2019 / 20 Pipeline of follow – on projects

×

**Slow progress** 

# Europe CCS – ready to go... almost

- 12 projects planned
- EERP: 3 projects cancelled,
   3 immobile and in critical state
- NER: 1 project remaining

**Investors** 

GCCSI active projects

75 globally

21 in EU

and Money

Regulation

- EU-ETS finance fail policy success
- Euro 1 Billion offered in EEPR

CCS in 2030 SET Plan
But may be > 2020 re-start

Technology

Legal

Science

## Accelerate injection: industry low cost CO2

- Gas processing, ammonia production release > 7 Mt /yr high purity CO2
- Near North Sea 1-3
   million tonnes
   CO2/year being
   released now

#### **ACTION**

EC
NSBTF
Ustilise CO2
availability

## Summary: how to go faster?

# CCS essential for Europe : climate, power, industry North Sea CO2 storage helps 10-year acceleration

- Driving policies towards goals essential
- Need practical actions now to develop transport and storage.
- Use industrial emissions, shipping, pipes
- Components exist need to be brought together and delivered – NSBTF, H-2020, Projects of Common Interest?
- Finance methods: EU-ETS, CCS certificates, Emissions standards ...
